FUNCTION: PRESENTS CARROLYDRATE LIGANDS TO SELECTINS.

IMPLICATED IN TUMOR CELL METASTRASIS (BY SIMILARITY).

SUBCELLULAR LOCATION: Type I membrane protein. Lysoson

THIS PROTEIN SHUTTLES BETWEEN LYSOSOMES, ENDOSOMES, AV

MEMBRANE (BY SIMILARITY).

PTM: O- AND N-GLYCOSYLATED; SOME OF THE N-GLYCANS ATTP

LAMP-1 ARE POLYLACTOSAMINOGLYCANS (BY SIMILARITY).

SIMILARITY: BELONGS TO THE LAMP FAMILY.

"The small subunit of the mammalian mitochondrial ribosome: identification of the full complement of ribosomal proteins prese.

J. Biol. Chem. 276:19363-19374 (2001).

SUBUNIT: Component of the mitochondrial ribosome small subuni (288) which comprises a 125 rRNA and about 30 distinct protein.

SUBCELLULAR LOCATION: Mitochondrial.

TISSUE SPECIFICITY: Heart, skeletal muscle, kidney and liver. Lower expression in placenta and peripheral blood leukocytes.

CAUTION: Ref. 6 sequence differs from that shown due to a numb sequencing errors that include frameshifts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Submitted [7]

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          DB

The invention relates to AgrD derived peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Muir

The present invention also describes a method for trea staphylococcus aureus infection comprising the administration of composition comprising (I). (I) has antibacterial activity, and cused as an agr gene response inhibitor. The peptides are useful fureating S. aureus infections.
The present sequence is that of a novel synthetic cyclic peptide of the invention that is capable of inhibiting the agr response of staphylococcus aureus. It is an AgrD-autoinducing peptide, where AgrD is a secreted agr-encoded peptide and where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. Preferred peptides may have the sequence NH2-X(n)-Z-X(y)-COOH, with a cyclic bond between the Z residue and COOH other than a thioester
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AgrD-autoinducing cyclic peptide, inhibitor of agr response
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           antibacterial;

The cyclic bond is especially a lactam or lactone bond. The thiolactone of the agr response. Elimination of the thiol ester component of the cyclic ring structure can destroy agr response activating activity while preserving and enhancing inhibitory activity. A cativity while preserving and enhancing inhibitory activity. A claimed method of preparing a cyclic peptide involves: assembling a characterist support; deprotecting the resulting protected assembled peptide; treating the deprotected peptide with neutral buffer for a time sufficient to deprotected peptide and cleave the peptide from the support; and recovering the cyclic peptide. The peptide is useful for bacterial interference, especially for the treatment of S. aureus
This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cole
                                                                                                                                                                                                                                                                                                                                                            Identifying and selecting genes for survival or virulence of mycobacteria by a comparative genomic analysis of the sequences Mycobacterium tuberculosis and M. leprae -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WO200274903-A2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mycobacterium Leprae

The present sequence represents a marker protein from Mycobacterium tuberculosis and Mycobacterium leprae identified using the method of the invention.
                                  This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polymucleotide sequence that is highly conserved in both genomes with no counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and provent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a marker protein from Mycobacterium tuberculosis and Nycobacterium tuberculosis and represent sequence represents.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence

                                                                                                                                                                                                                                              ABB57436 to ABB57504 represent mycobacterial amino acid sequences (I) encoded by ABZ71062 to ABZ71130 (II), which are isolated from Mycobacterium tuberculosis. (I) are encoded by genes (II) whose expression is induced or up-regulated during culture of a mycobacterium under conditions defined by a dissolved oxygen tension of at least 10% air saturation measured at 37 plus degrees Celsius, when compared with a dissolved oxygen tension of at least 40% air saturation measured at 37 plus degrees Celsius. (I) and (II) have antibacterial, tuberculostatic and immunostimulant activities, and can be used in vaccines and gene therapy. (I) and (II) can be used for the manufacture of a medicament for treating or preventing a mycobacterial infection. They can also be used for the manufacture of a diagnostic reagent for identifying a mycobacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         22-JUN-2001; 2001GB-0015365.

The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Muir

The invention relates to AgrD derived cyclic peptides, a composition containing a peptide and a carrier, and a method for the production of the cyclic peptides. The peptide inhibits the agr response, which is normally associated with the release of virulence factors of Staphylococcus aureus. An AgrD peptide is produced by S. aureus that activates the agr response in strains of a single group, but interferes with this response in strains of different groups. The peptides and composition containing them can be used to treat infections by S. aureus.

The peptide corresponds to the CC that it is that of a great agreement with a Cys5 to Ser mutation (lactone). It was synthesised on a Wang-resin using an Fmoc N-alpha protection strategy. Following chain assembly, the peptide corresponds to the support and the Ser's residue deprotected by treatment with a trifluoroacetic acid anisole:water mixture (90:5:5) for 4 hr. The partially protected peptide-alpha carboxylates were then dissolved in DMF and treated with PyBOP complete after 2 hr. The remaining protecting groups were then cremoved by treatment with HF and the peptide purified by HPLC. The cyclic peptide is capable of inhibiting the agr response of CR Staphylococcus aureus. The thiololactone structure within native Replacement of the thiol ester component of the cyclic ring inhibitory activity. The cyclic peptides are useful for centuring inhibitory activity. The cyclic peptides are useful for infaction.

The peptide is derived from the cyclic AgrD2 peptide of Stabhylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the garpathetic peptide was assayed using cultured S. aureus strains containing a bera-lactamase reporter gene fused to the agr3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAM51001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured calls at uM concentrations. The invention when added to cultured calls at uM concentrations. The invention of the monitored spectrophotometrically between the peptides are useful for bacterial interference, especially for the treatment of S. aureus

The peptide is derived from the cyclic AgrD2 coperated of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamase reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response to be monitored spectropometrically. Unlike an AgrD2 thiololactone cyclic peptide (see AAMS1001), the present peptide was unable to either activate or inhibit the agr response, even when added to cultured cells at uM concentrations. The invention when added to cultured cells at uM concentrations. The invention and methods for preparing them. The cyclic peptides are useful for infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          08-MAY-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is that of a novel synthetic AgrD2 linear free acid peptide. The peptide is derived from the cyclic AgrD2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel synthetic, cyclic AgrD-autoinducing peptide for bacterial interference and for treating Staphylococcus aureus infection i

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is that of a novel synthetic AgrD2 lactone cyclic peptide in which residue 5 of the peptide is derived if linked to residue 9 via a lactone bond. The peptide is derived from an AgrD2 peptide of Staphylococcus aureus group II. AgrD2 is a secreted agr-encoded peptide, where the agr locus controls the synthesis of virulence factor and other extracellular proteins responsible for pathogenicity in S. aureus. The biological activity of the synthetic peptide was assayed using cultured S. aureus strains containing a beta-lactamese reporter gene fused to the agrP3 promoter. This allowed activation or inhibition of the agr response to be monitored spectrophotometrically. The lactone AgrD2 peptide inhibited the agr response of group I S. aureus strains without activating the agr response of group I I or III strains. The invention provides claimed cyclic peptides (see AAM50899-906 and AAM50899) and methods for preparing them, especially peptides where the cyclic bond is a lactam or lactone bond. The cyclic peptides are useful for bacterial interference, especially for the treatment of S. aureus infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to the use of autoinducer-2 (AI-2) agonists or antagonists for regulating activity of autoinducer-2 receptor, regulating bacterial growth and pathogenesis. Synergistic antibiotic compositions comprising inhibitors of the quorum-sensing pathway of a microorganism are also provided. Methods using such AI-2 analogues are useful for treating pathogen-associated disease states. The compounds and antibiotic compositions can be used to inhibit bacterial cell growth and/or biofilm formation on a medical device, particularly for promoting growth of skin graft replacements used in the treatment of burns and ulcers. They may also be used to or did wound repair, and to inhibit bacterial cell growth and biofilm formation in or on products or devices used for personal hygiene. The present sequence represents a inhibitor of peptide-mediated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques

(II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical a food supplement. (II) and its binding partners are useful in medical (II) are useful for treating (II) are useful for treating (II) and other traits or biological activity. (II) and (II) are useful for treating (II) appears and polymeptide and polymeride sequences have applications in (II) and (II) are useful for treating (II) and (II) are useful for treating (II) are useful for medical sequences. ABG00010-ABG30377 represent novel human (II) are useful form the printed specification, but was obtained in electronic format directly from WIPO at fifth (II) are the sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at fifth (II) are useful formation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

This invention describes a novel rabbit carboxylesterase polypeptide (I) capable of metabolizing a chemocherapeutic prodrug and its inactive metabolites into an active drug. The invention also describes a composition comprising (I) and a disease-specific responsive promoter. This composition is useful for sensitizing tumor cells to a chemotherapeutic prodrug (preferably CRT-11 or APC) by transfecting into tumor cells, and contacting the sensitized cells with a chemotherapeutic prodrug to inhibit growth of the tumor cells. The composition can also be administered to the site of tumor resection to inhibit tumor recurrence, and be administered to bone marrow cells to remove tumor cells. The products of the invention are useful for identifying drugs that are inactivated by a carboxylesterase enzyme, and are also useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Oryctolagus cuniculus
